Alex Example

PhD Researcher • School of Computing, Example University

alex.example@example.edu • example.org • Google Scholar • GitHub • LinkedIn

Research interests

Reliable machine learning; reproducible evaluation; scientific software; data quality and provenance.

Education

PhD in Computer Science 2023 – Present
Example University Example City
Thesis: Evaluation and Reproducibility in Machine Learning Systems. Expected completion: 2027. Supervisor: Prof. Jamie Example.

MSc in Computer Science 2021 – 2023
Example Institute of Technology Example City
Dissertation: Tracking Data Provenance in Scientific Workflows.

BSc in Computer Science 2017 – 2021
Example University Example City

Research experience

Doctoral Researcher in Reliable Machine Learning and Scientific Software 2023 – Present
Reliable Computing Group, Example University Example City

- Develop evaluation methods that connect reported model performance to dataset construction, implementation choices, and reproducible evidence.
- Maintain shared experiment configurations, analysis scripts, and documentation for collaborative research.

Research Assistant 2022 – 2023
Data Systems Laboratory, Example Institute of Technology Example City

- Implemented data validation and provenance tracking for scientific pipelines.
- Collaborated with researchers to document datasets and reproduce analyses.

Visiting Research Student June – August 2022
Example Centre for Scientific Computing Example City

- Investigated how data transformations affect the interpretation of evaluation results.
- Presented a reusable workflow for recording preprocessing decisions.

Preprints

[P1] **A. Example** and J. Sample. “Reproducibility Checks for Evolving Research Pipelines”. 2026 • Preprint.

† Equal contribution. * Corresponding author.

Funding

Doctoral Research Scholarship 2023 – 2027
Example University Scholarship recipient
Supports doctoral research on reproducible evaluation and scientific software.

Research Software Seed Grant 2025 – 2026
Example Research Foundation Project contributor
Contributed evaluation software and documentation to a collaborative project.

Teaching

Teaching Assistant: Machine Learning 2024 – 2026
Example University Postgraduate
Led practical sessions on evaluation, experimental design, and reproducible implementation.

Teaching Assistant: Data Management 2023 – 2024
Example University Undergraduate
Prepared exercises on relational databases and data cleaning; supported project feedback.

Workshop Instructor: Reproducible Research 2025
Example Graduate Research School Graduate workshop
Delivered a practical introduction to version control, environment management, and the documentation of computational analyses.

Student supervision

MSc research project: Dataset Documentation 2025 – 2026
Example University Co-supervisor
Co-supervised a project on documenting dataset transformations and evaluation assumptions.

BSc honours project: Scientific Pipeline Testing 2024 – 2025
Example University Research mentor
Mentored the design of checks for scientific data pipelines and research software.

Academic service

Reviewer 2025 – 2026
Example Journal of Computing; Example Conference on Reliable Systems.

Program Committee Member 2026
Example Workshop on Reproducible Machine Learning.

Artifact Evaluation Committee Member 2025
Example Conference on Scientific Software.

Research Seminar Organiser 2024 – 2025
Coordinated the graduate seminar series in the Reliable Computing Group.

Invited talks

From Experiment Logs to Reproducible Evidence 2026
Example Research Seminar Invited talk

Documenting Data Transformations in Scientific Pipelines 2025
Example Graduate Research Forum Research talk

Honours and awards

Graduate Research Presentation Award 2025
Example University.

Research Software Contribution Award 2024
Example Computing Society.

Research software

Pipeline Ledger 2025 – Present
Scientific workflow provenance toolkit Maintainer
Records dataset versions, transformation steps, and analysis configurations for collaborative computational research.

Evaluation Notebook Collection 2024 – Present
Reusable evaluation and reporting examples Contributor
Provides documented examples for comparing model behaviour across datasets and experimental conditions.

Skills and languages

Programming and tools: Python, SQL, Git, Linux, LaTeX; data analysis, experiment automation, and scientific software development.

Languages: English and Mandarin Chinese.
